

Proficy Change Management 5.9

The latest release of Proficy Change Management features a new web-based HTML thin client that provides additional end-user and administrative capabilities for increased accessibility, flexibility and power.

Features and Additional Value

- New Web Client
- New Product Wizard
- New Device Templates
- Lower Deployment Costs
- Lower Maintenance Costs
- Increased End User Productivity

What's new about Proficy Change Management 5.9?

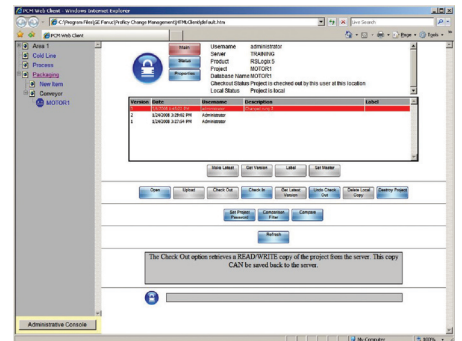

To help you get more out of your Proficy Change Management solution, you can now take advantage of a new thin client. With easier, more intuitive access to project files and easier deployment of the client, you can achieve reduced cost of ownership, add new scheduler technology to ensure the validity of the files in your control system, and leverage new product support.

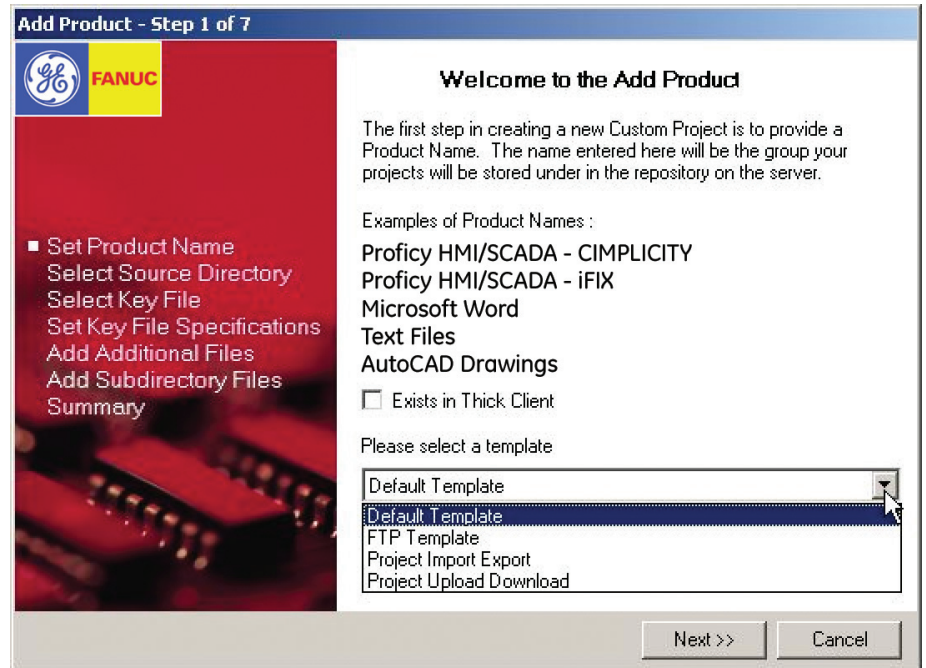

Web-based end-user client for easier accessibility

The HTML-based client is a thin, easy-to-deploy client with a small footprint that will save you time and effort installing or updating traditional 'thick' clients. It also provides easy access to projects on the Change Management server. The client provides access to common end-user functions such as check out, check in, open, version reports, compare and more.

The drag-and-drop configuration allows you to easily create a user interface to organize projects and provide customized web pages if desired.

The client supports popular third-party products from Rockwell, Siemens, and Schneider, as well as status and compare for Proficy Machine Edition. You can still administer and access older project types via the traditional client. The new client will work with version 5.7 or 5.8 servers, and can be used in systems with the traditional client.

“Add Product Wizard” for increased flexibility

The new product wizard streamlines the set up of documents and FTP devices, which secures your automation software and reduces system setup time. You can create your own product types by asking a few key questions about the files you want it to manage, and it automatically creates a profile for those file types. It can be used to manage any file type and comes pre-configured with templates for handling of FTP devices such as Robots, Vision Systems, and CNCs, file upload-download for SCADA systems, PC control systems and other file storage systems.

Administrative tools that provide you with more power

Proficy Change Management 5.9 provides several common administrative tools for the thin client that allow you to add projects, configure project properties, add users to projects, and configure which groups can access the project, set up email notifications, and edit the navigation tree in the client. It's simple to use and puts the power of administration at your fingertips.
